## L3.9 In-class Assignment – Practice Exam Questions

**CPSC 292 – 11/11/2026**

**Name:** _____ **Section:** _____

### Question 1

Write a function that performs the calculation $p = 3j^3 + 6kj + k^4 + 3$. Include an example call to demonstrate your function's operation.

### Question 2

Create a repeat loop that prints out all even numbers up to and including 100. (Hint: `%%` will give you the remainder after division.)

### Question 3

Rewrite the answer for Question 2 using a while loop.

## Question 4

Use the iris data set, write a conditional that creates a new column in the data set named `species_numbers` and records the following numbers for each species: 10 for "setosa", 30 for "versicolor", and 55 for "virginica".

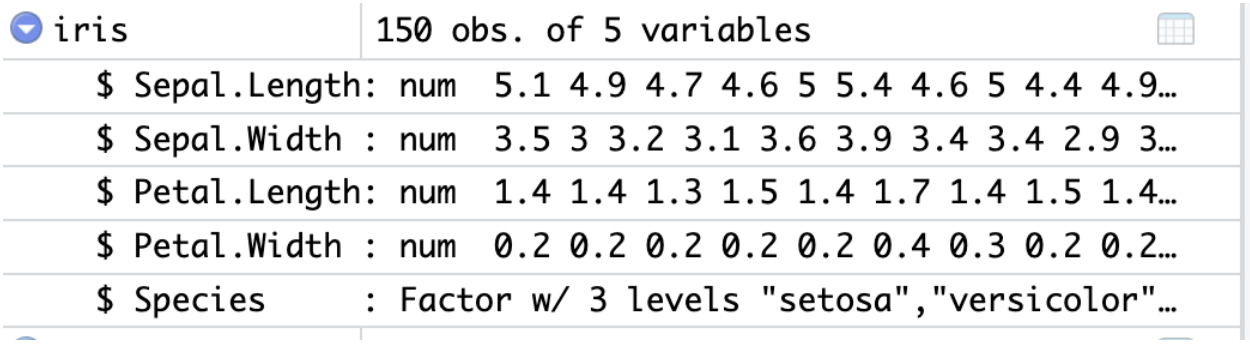

Figure 1: The iris data set.

## Question 5

Rewrite the answer for Question 4 using a loop and a traditional conditional.
