L3.2 In-class Assignment – Functions

CPSC 292 – 10/23/2026

Name: _____ **Section:** _____

Collaboration team: _____

Question 1

Explain the syntax of a function. Write out an example function, label each part, and describe the purpose of the part.

Question 2

You have a function `mystery_fxn()` which produces the output:

```
> mystery_fxn(4)
[1] 2
[1] "Bang!"
> mystery_fxn(6)
[1] 3
[1] "Bang!"
> mystery_fxn(15)
[1] 7.5
[1] "Bang!"
>
```

Figure 1: Output of mystery_fxn()

Write out the code for this function.

Question 3

Write a function that adds two user-provided numbers together and then multiplies them by two. Include an explicit return.

Question 4

Define scoping and describe its use in calling functions in R.

Question 5

You are adding the `dplyr` library to your environment and get the following message:

```
> library(dplyr)

Attaching package: 'dplyr'

The following objects are masked from 'package:stats':

    filter, lag

The following objects are masked from 'package:base':

    intersect, setdiff, setequal, union

>
```

Figure 2: Attaching dplyr package message

What does this message mean? What should you be careful of if your code already uses `filter()`?
