

## L2.2 In-class Assignment – Basic Graphing

CPSC 292 – 9/23/2026

Name: \_\_\_\_\_ Section: \_\_\_\_\_

Collaboration team: \_\_\_\_\_

### Question 1

Create the code to make a basic scatter plot graph. Create the points in two separate vectors, make a line of code that graphs these two vectors against each other, and then draw out the graph as R would graph it.

### Question 2

Create a third vector of data and write a line of code that would add it to your original plot. Add the output of this new line of code to your original plot in a different color than your original plot.

### Question 3

Complete Davies' Exercise 7.1 part b. Assume that the data set is stored in a data frame named `size_dat` and that the columns are named `Weight`, `Height`, and `Sex`. Write the code that will complete the question and also predict R's output by drawing a scatter plot of theses data.
